

WORLD MARKET LEADER IN MEASURING SYSTEMS

RADAR

A New Dimension in Width Measurement

Radar Antennas

For width measurement that gives you the most precise reads, add our **Hot Strip Radar Width Gauge** to your processing line.

This technologically advanced remote, non-contact measuring system can penetrate steam, water, mill scale and other elements that hamper the abilities of traditional gauges to take accurate measurements.

This gauge significantly increases your ability to meet the most demanding specifications — resulting in higher productivity and less re-work.

Over the past decade, IMS gauges have been installed in hot mill upgrades throughout North America, giving mills a true measure of performance like never before.

To keep your competitive advantage, call 724.772.9772 or visit www.imssystems.com
